CHANGING THE BATTERY

CHANGING THE BATTERY

This unit runs on a **9V** alkaline battery. It is recommended that either **'Duracell'** or **'Energizer'** brands be used.

To change the battery, please refer to the diagram below.

- Simply slide the entry pad housing up and carefully pull it away from the mounting surface to expose the battery compartment.
- The battery connector is easily removed by unclipping it from the terminals on top of the battery. Care must be taken to ensure that the wires leading from the battery connector to the entry pad are not pulled out from the housing.
- Once the battery has been changed, carefully position the entry pad back over the mounting screws and slide the entry pad back into position. Ensure there are no wires or cables trapped between the entry pad and the safe door.

Specifications

Power Supply : DC 9V

Power Supply Range : DC 4.5 – 12V

Standby Current : < 15 mA

Active Current : < 20 mA

Battery Low Voltage : 5.2 +/- 0.2 V

Working Temperature : -25 °C ~ + 60 °C

Working Humidity : < 95%

Storage Temperature : - 45 °C ~ + 85 °C

Manager/User Code Length : 6 Digits
